75% smart meter coverage across the city

CEM is going to achieve a significant milestone by installing over 200,000 smart meters by the end of 2023, resulting in an impressive 75% coverage rate.

The installation of smart meters lay a solid foundation for comprehensive intelligent and convenient service experience. Launched features include but not limited to flexibility of meter reading schedule, real-time remote power reconnection, and daily consumption visualization in eService. The meter replacement plan will be ongoing to speed up to achieve the target of full coverage, helping to build an efficient smart city.

Bind UnionPay credit card to automatically pay EV charging fees

CEM has recently launched the “UnionPay Frictionless Payment” method for electric vehicle (EV) charging. You only need to bind your UnionPay credit card on the CEM APP, select “UnionPay Frictionless Payment” when charging, and the system will automatically deduct the charging fee directly from the bound credit card. It’s simple and secure.

You can also leave your comments on EV charging services via the EV Message Board on CEM APP to let us know more about your experience!

A step forward into making Macau a greener city

Since October 2023, CEM has been implementing the Food Waste Recycling Program, an initiative promoted by the Environmental Protection Bureau (DSPA) of the Macau SAR Government.

CEM has two canteens serving meals for its employees, one in CEM Main Building, and the other in the Coloane Power Station. DSPA collects all the food waste from the two canteens and transports it to the Macau Refuse Incineration Plant for treatment. The processed organic fertilizer derived from the food waste will be used for plant cultivation in IAM’s environmental infrastructure projects.

Save money and energy at home while on vacation

- ✓ Unplug all appliances that don't need to be used while you're away, as they continue to consume energy even when turned off;
- ✓ Make sure lights are all turned off. For security lights, consider using a timer;
- ✓ Adjust the temperature to higher settings on your refrigerator by one or two degrees, your food will stay cold while preventing excess energy use;
- ✓ Turn off or lower the temperature of your water heater to conserve water and reduce energy costs.
